

Buyer Beware

Quarantine Strategies for Purchased Sheep

- Bought in sheep may be carrying resistant worms, scab mites and liver fluke.

YARD ON ARRIVAL, and treat as follows:

- **For worms and scab**

- Drench with **4-AD**(Zolvix) **or 5-SI**(Startect) wormer
+ Inject with 1% **moxidectin*** (Cydectin or Zermex 1%)
or

- Drench with **4-AD** (Zolvix) **or 5-SI** (Startect)
+ Drench with **moxidectin*** oral (Cydectin or Zermex)
+ Plunge dip in **OP**

* discuss with your vet if Footvax has been used or is to be used.

- **For liver fluke**

- Closantel (Flukiver) drench or nitroxynil (Trodax) injection
- Repeat 6 weeks later

- Hold sheep inside for 24 - 48 hours after treatment, turn out to land that has had sheep grazing that year and has no fluke habitat. Keep separate for at least 3 weeks.
